No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                            Score

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

The protein may be used to raise specific antibodies, as assay reagents, as diagnostic tissue markers, for the isolation of cognate receptors, ligands and binding proteins, and as biologically active agents. Nucleotides encoding the protein may be used as primers and probes or antisense molecules, and in gene therapy. Cells transformed with these potentially useful therapeutically.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WO200154477-A2
                                                                                                                                                                                                                                                                           The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a cDNA biodiversity and for nutritional purposes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            25-JAN-2001; 2001WO-US02687.

This sequence represents the coding sequence of human cDNA clone CC HP02000 which encodes a 32 kD protein with two putative transmembrane CC domains. The cDNA was isolated from a human liver cell cDNA library, and the common tissue localisation studies has been found to be expressed only in CC transporter (EMBL Accession No. Y0945) which is involved in drug CC transporter (EMBL Accession No. Y0945) which is involved in drug CC may be used to raise specific antibodies, as assay reagents, as CC diagnostic tissue markers, for the isolation of cognate receptors, CC ligands and binding proteins, and as biologically active agents. CC Nucleotides encoding the protein may be used as primers and probes or CC antisense molecules, and in gene therapy. Cells transformed with these CC potentially useful therapeutically.
                                                                                                                                                                                                                                                                                                                                   Matches

OAT's are membrane proteins that facilitate the transport of organic anions across the proteins that facilitate the transport of organic anions across the cell membrane. The mechanism of transport is thought to be a secondary or tertiary active transport involving exchange of another organic anion. hOAT2A and hOAT2B are thought to be splice variants as they are identical except at the C-terminal end. hOAT proteins and the DNA encoding them, may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate hOAT expression.

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis .

WPI; 2001-483426/52

```
AAAK54951 to AAK64702 encode the human immune/haematopoietic antigen (1) cc amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic cc amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic cc contributy, and can be used in gene therapy and vaccine production. (I) cc activity, and can be used in gene therapy and vaccine production. (I) cc proteins and polynucleotides may be used in the prevention, diagnosis and cc treatment of diseases associated with inappropriate (I) expression. For cc treatment of they may be used to treat disorders associated with decreased cc example, they may be used to treat disorders associated with decreased cc example, they may be used to treat disorders in a patient's genome cc that affect the activity of (I) by expressing inactive proteins or to complement the patients own production of (I). Additionally, (I) cc supplement the patients own production of (I). Additionally, (I) cc supplement the patients own produce the secreted (I), by inserting cc polynucleotides may be used to prevent, and include acids into a host cell and culturing the cell to express the cc protein. (I) proteins and polynucleotides may be used to prevent, cc diagnose and treat immune/haematopoietic-related diseases, especially capacity and cancer metastases of haematopoietic antigen genomic cc to AAK87694 represent human immune/haematopoietic antigen genomic cc represent seniered in the exemplification of the present invention. AAK5492 to AAK5450 and AAM62169 cr patresent senieres used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            δã

AXX AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic CC arctivity, and can be used in gene therapy and vaccine production. (I) CC proteins and polynucleotides may be used in the prevention, diagnosis and CC proteins and polynucleotides may be used in the prevention. For CC treatment of diseases associated with inappropriate (I) expression. For CC example, they may be used to treat disorders associated with decreased CC example, they may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC used the activity of (I) by expressing inactive proteins or to CC used the activity of (I) by expressing inactive proteins or to CC used the nucleic acids into a host cell and culturing the cell to express the CC protein. (I) proteins and polynucleotides may be used to prevent, CC diagnose and treat immune/haematopoietic-derived cells. AAK64703 CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703 CC cancers and cancer metastases of haematopoietic antigen genomic to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK9490 and AAM82169 control of the present invention.

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic proteins and polynucleotides may be used in the prevention. (I) treatment of diseases associated with inappropriate (I) expression. For expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to polynucleotides may be used to freat disorders associated with decreased that affect the activity of (I) by expressing inactive proteins or to polynucleotides may be used to production of (I). Additionally, (I) the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK54950 and AAM82169 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 782 BP; 242 A; 119 C; 105 G; 316 T; 0 other;

                                                                                                    The present sequence encodes a calcium channel transport polypeptide. The polynucleotides, polypeptides, and antibodies are useful for preventing, treating, or ameliorating diseases associated with anomalies in calcium trafficking across the plasma membrane. They are used to diagnose, detect and treat or prevent diseases or conditions such as neural disorders (e.g. HIV-induced dementia), immune system disorders (e.g. rheumatoid arthritis), muscular disorders (e.g. muscle contractile dysfunction), reproductive disorders, gastrointestinal disorders, pulmonary disorders, cardiovascular disorders (e.g. arrhythmias), renal disorders, proliferative disorders, and/or cancerous diseases and conditions (e.g. lung carcinoma or breast cancer).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        proliferative disorder; cancer; lung carcinoma; breast cancer; ss

CC haematopoiesis regulatory activity; tissue growth activity;

CC haematopoiesis regulatory activity; tissue growth activity;

CC chemotactic or chemokinetic activities; haemastatic, thrombotic or

CC thrombolytic activities; receptor or ligand activities; or may be

CC dispolated in oncogenesis, cancer cell proliferation or metastasis.

CC Depending on their biological activities, polypeptides and nucleotides of

CC conditions, e.g., by protein or gene therapy. Such conditions include

CC cancers, haematopoletic discorders (e.g., myeloid or lymphoid cell

CC cancers, chronic inflammatory conditions (e.g., asthma or arthritis),

CC arterial ischaemia, bone discorders (e.g., myeloid or lymphoid cell

CC vascular growth. Polypeptides involved with tissue regeneration and

CC healing (e.g., of burns, inclisions and ulcers), while those with

CC polypeptides with growth factor activity may be used to promote wound

CC promote cell growth. For example, such polypeptides may be used to

CC manipulate stem cells in culture to give rise to neuroepithelial cells

CC manipulate stem cells in culture to give rise to neuroepithelial cells

CC may also be used in the diagnosis of the above conditions, and indreg

CC may also be used in the diagnosis of the above conditions, and indreg

CC conditions, and indreg

CC conditions and uncers in a cell cultures to

CC may also be used in the diagnosis of the above conditions, and in drug

CC conditions and uncers in a cell cells

CC may also be used in the diagnosis of the above conditions, and in drug

CC movel human polypeptide of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to human nucleic acids (AA157798-AA161369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, the encoded polypeptides (AAM38642-AAM42213) with nootropic, the immunosuppressant and cytostatic activity. The polynucleotides are useful immunosuppressant and cytostatic activity a polypeptide or polynucleotide in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and system such as localised neuropathies and central nervous system diseases, such as localised neuropathies and central nervous system disease, amyotrophic Alzheimer's, parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotactic/chemokinetic activity, haemostatic activiny inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, and throwards activity, architits and inflammation, leukaemias and assays for receptor activity, arthritis and inflammation, leukaemias and

         The present sequence is transporter and ion channel-10 (TRICH-10) cDNA. TRICH is used as vaccine. TRICH is useful for treating a disease or condition associated with decreased expression of functional TRICH, such as transport disorder including amyotrophic lateral sclerosis, cystic fibrosis, Becker's muscular dystrophy, Charcot-Marie Tooth neurological disorders including Alzheimer's disease, Duchenne muscular dystrophy, angina and hypertension, neurological disorders including Alzheimer's disease, amnesia, bipolar
disorder, dementia, depression, epilepsy, ischaemic cerebrovascular

xx AAC61879-93 encode secreted human proteins. The secreted proteins are cc useful in assays to determine their biological activities. The proteins cc useful in assays to determine their biological activities. The proteins cc earlies are inserted proteins. The polynucleotide molecules can be used as comparison to proteins and antibodies are useful in diagnosis and treatment of biomarkers for tissues or chromosomes and to elicit immune responses. The cc diseases associated with altered expression of these proteins. The cc diseases associated with altered expression of these proteins. The cc disorders, stem cell disorders, osteoporosis or osteoparthritis, burns, cc disorders, stem cell disorders, central and peripheral nervous cc inclsions, ulcers, periodontal diseases, central and peripheral nervous cc system diseases and neuropathies, for healing fractured bones and to cc proteins are also useful for gut protection or regeneration, for the creatment of lung or liver fibrosis, for stimulating blood cell creatment of lung or liver fibrosis, for stimulating blood cell of bone marrow transplantation patients.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 secreted protein; platelet disorder; stem cell disorder; osteoporosis; osteoarthritis; burn; inclsion; ulcer; periodontal disease; neuropathy; nervous system disease; bone growth; cosmetic plastic surgery; qut protection; gut regeneration; fibrosis; cancer; the protection; disease; bone growth; cosmetic surgery; put regeneration; fibrosis; cancer;

The present sequence is human protein with hydrophobic domain encoding cDNA clone HP03613: The polynucleotide and polypeptide of the invention may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The polynucleotides may be used to produce the polypeptide, by inserting the nucleic acids

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           NOTE: This is a 'working draft' sequence. It currently consists of 15 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence this record will be updated and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Web site: http://www-seq.wi.mit.edu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                * NOTE: This is a 'working draft' sequence. It currently sequences is consists of a contigs. The true order of the pleces is not known and their order in this sequence record as arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence this record will be updated with the crossion number will as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequencing vector: PCR products; 100% of reads chemistry: Dye-terminator ET-amersham; 100% of reads chemistry: Dye-terminator ET-amersham; 200% of reads chemistry: 152010 bases at least Q40 consensus quality: 152010 bases at least Q30 consensus quality: 15530 bases at least Q30 quality coverage: 6.27x in Q20 bases; sum-of-contigs quality coverage: 6.27x in Q20 bases;

                                                               arbitrary. Gaps between the contigs are represented as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   29 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   as soon as it is available and the accession number will be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         NOTE: This is a 'working draft' sequence.
